measures:

Do not eat or drink while working.

Wash hands before breaks and at the end of work.

Use suitable respiratory protective device in case of insufficient ventilation.

. Respiratory protection: . Protection of hands: Solvent resistant gloves

Protective gloves

The glove material has to be impermeable and resistant to the product/ the substance/ the

preparation.

Due to missing tests no recommendation to the glove material can be given for the

product/ the preparation/ the chemical mixture.

Selection of the glove material on consideration of the penetration times, rates of diffusion

and the degradation Nitrile rubber, NBR

. Material of gloves

The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be

calculated in advance and has therefore to be checked prior to the application.

. Penetration time of glove material Value for the permeation: Level ≤ 0,7 mm 480min (8h) EN374 (Contd. of page 3)

The determined penetration times according to EN 16523-1:2015 are not performed under practical conditions. Therefore a maximum wearing time, which corresponds to 50% of the penetration time, is recommended.

The exact break through time has to be found out by the manufacturer of the protective

gloves and has to be observed. Tightly sealed goggles
