8.2 Exposure controls

. Personal protective equipment:

. General protective and hygienic

measures:

Keep away from foodstuffs, beverages and feed. Immediately remove all soiled and contaminated clothing

Wash hands before breaks and at the end of work. Do not inhale gases / fumes / aerosols.

Avoid contact with the skin.

Avoid contact with the eyes and skin.

. Respiratory protection: Not required.

. Protection of hands: Solvent resistant gloves

Protective gloves

The glove material has to be impermeable and resistant to the product/ the substance/ the

preparation.

Due to missing tests no recommendation to the glove material can be given for the

product/ the preparation/ the chemical mixture.

Selection of the glove material on consideration of the penetration times, rates of diffusion

and the degradation Nitrile rubber, NBR

. Material of gloves Recommended thickness of the material: ≥ 0.7 mm

The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a

preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

Value for the permeation: Level ≤ 0,7 mm 480min (8h) EN374 . Penetration time of glove material

The determined penetration times according to EN 374 part III are not performed under practical conditions. Therefore a maximum wearing time, which corresponds to 50% of the

penetration time, is recommended.

The exact break through time has to be found out by the manufacturer of the protective

gloves and has to be observed.

. Eye protection: Tightly sealed goggles
